

The following guidelines are designed to help you submit suitable articles to the art&science section of Nursing Standard

Please note that your manuscript must be submitted to Nursing Standard ONLY. It is considered unethical to send your manuscript to more than one journal. It will not increase your chances of publication because editors will not consider articles that have been published elsewhere.

Presenting a clinical article

Articles should be of interest to nurses working in clinical practice, have something new to say or offer a fresh approach to an old subject, challenge current thought or practice, predict future trends, or review current thinking. One of the best ways of understanding how to write in a clinical style is to read a selection of articles previously published in Nursing Standard's art&science section. There are various styles of article published in the section:

Literature review This is a thorough and comprehensive review of current writing on a particular aspect of nursing. Up to date referencing is essential, as is a strong conclusion to bring the subject together. The article should begin with an abstract of about 50 words.

Systematic reviews and original research These should be written in classic research style, that is: abstract; introduction; literature review; aims; methods; results; discussion and conclusion. The abstract should be around 150 words, and summarise the aim, methods, results and conclusion, and a box highlighting the implications of the research for practice should be presented in bullet points at the end of the article. Please refer to the research guidelines when submitting research articles.

Innovations in practice An article that describes logically and critically a particular nursing procedure, the work of a ward or unit, or the role and function of a nursing post or specialty. The relevance of this work to other nurses should be discussed.

Length Manuscripts should be between 2,500 and 3,500 words long, excluding references. Please note your word count at the end of the article. If your manuscript falls outside these limits, please contact art&science editor Gwen Clarke on 020 8872 3158 who can then discuss with you the best way to proceed.

Illustrations Charts, diagrams, tables, photographs and illustrations are useful. Please ensure that any illustrative material is numbered and captioned and that copyright has been obtained before you submit your article for publication. Photographic material should be supplied in a high quality, uncompressed JPEG format.

References

All manuscripts should be supported by up to date literature, which needs to be referenced comprehensively. We rely on your integrity to supply accurate and complete references. Inaccurate referencing reflects badly on the author and the journal.

References in the text Please ensure you use the Harvard (name and year) system for references in the text. For example, 'It has been suggested that nurses should examine their own relationship with patients (Brown 2010)'. For three or more authors, print the first author's name followed by *et al*, for example 'As White *et al* (2009) argue...' Note that White *et al* is acceptable for White, Red and Blue but not for White and Red, which should be written as White and Red (2008).

When several references are cited simultaneously the order should be chronological, from earliest to most recent. If there are two or more references to the same author, the order should also be chronological, for example (NICE 2009, 2010).

References in the reference list Each journal reference should include:

- ▶ The author's surname and initial(s): print the surname and initial of all authors for references with six authors or fewer. For seven or more authors, print the first three and add *et al* (in italics).
 - ▶ The year of publication in brackets.
 - ▶ The title of the article in full.
 - ▶ The name of the journal in full.
 - ▶ The volume, issue number and first and last page numbers.
 - ▶ Use alphabetical order for references. If there are two or more references to the same author, use chronological order.
- Each book reference should include (in this order):
- ▶ The author's surname and initial(s). Please indicate if the people cited are editors.
 - ▶ The year of publication in brackets.
 - ▶ The title of the book in italic.
 - ▶ The edition (if applicable).
 - ▶ The publisher.
 - ▶ The city of publication, and the state if in the United States.
 - ▶ If you are citing a chapter in a book, supply the author's name, chapter title and page numbers.
 - ▶ Use alphabetical order for references. If there are two or more references to the same author, use chronological order.

Examples

Department of Health (2008) *High Quality Care for All: NHS Next Stage Review Final Report*. The Stationery Office, London.

Dougherty L, Lister S (Eds) (2008) *The Royal Marsden Hospital Manual of Clinical Nursing Procedures*. Seventh edition. Wiley-Blackwell, Oxford.

Septon M (2009) Nursing management of patients with severe ulcerative colitis. *Nursing Standard*. 24, 15-17, 48-57.

Plagiarism

Plagiarism is the unreferenced use of others' published work or unpublished ideas or opinions which are represented as your own work. For example, copying or paraphrasing text, a sentence, paragraph, table or figure from another's work and not referencing it is not acceptable. Plagiarism also applies to work that you may have published previously.

The article must be your own work and should be written in your own words. All mention of others' work must be attributed to the originating author(s) and referenced in full. Any direct quotations must be included in quotation marks. If substantial sections of text or illustrative material are used in the article, you must obtain written permission from the copyright holder before submitting the article for publication. All articles submitted to Nursing Standard are checked for plagiarism using an automated software package.

Preparing your text

While MS Word is preferred, you may submit your article in any widely used text-editing file format. The submitted file should not contain the abstract

(entered separately) and articles should be set up to print on one side of A4 paper, with clear, plain, dark, serif print (such as Times New Roman) using double line spacing. Leave margins of an inch and a half for reviewers' comments and ensure the pages are numbered. Remember to keep a copy for your records. If you have any queries contact Sarah Musisi on 020 8872 3171 or Jane Yates on 020 8872 3141.

Submitting your manuscript

Contributions should be submitted via the online submission system at www.edmgr.com/rcnp-ns. A tutorial to help authors use the system is available through the 'Instructions for authors' link on that page. The registration and submission process will ask for all your contact details and the following information for all other authors of your article: full name, job title, institution, email address and country.

What happens to your manuscript

You will receive an email acknowledging receipt of your submission and will thereafter be able to track its progress online. The manuscripts are then assessed internally before being sent to external experts for double-blind peer review. This means that the reviewers do not know who the author is and the author is not informed who the reviewers are. This helps to ensure that manuscripts are given an objective and unbiased review.

Authors can expect to wait approximately 12 weeks after acknowledgement before receiving a response. This will either be acceptance without revision, a request for revision or rewrite, or a letter explaining that your manuscript has not been accepted for publication.

Accepted If your manuscript is accepted, you will be asked to complete an author's form and sign a publisher's agreement for the purposes of copyright. The article will then be scheduled to appear in an issue, usually within six months of acceptance. Articles will not be published without acceptance of the publisher's agreement from each author, and emails will be sent requesting this automatically.

Shortly before your article is due to be published, you will be asked to proofread both an edited version and confidential page proofs and answer any editorial queries raised.

Request for rewrite In most cases, authors are asked to revise their manuscripts in the light of the comments made by external reviewers and editorial staff. These comments are intended to be constructive and to help produce a high-quality article. In this case, the manuscript will be made available to you with a copy of the reviewer's comments, and a deadline for re-submission will be set. Revised manuscripts are usually returned to external reviewers to ensure the changes made are satisfactory.

Not accepted for publication There are many reasons why your manuscript may not be accepted for publication and these may not necessarily reflect the quality of the submission. Where possible we will try to explain why. We retain the right, however, not to engage in further correspondence.

Complaints

Nursing Standard is a member of the Committee on Publication Ethics (COPE), which will investigate complaints that members have not followed the COPE Code of Conduct for Journal Editors. www.publicationethics.org.uk
